

Senior Intune Engineer

XMS Solutions

Help shape secure, reliable endpoint management for a large government organization. Join XMS Solutions and bring your Microsoft Intune, Entra ID, and MCM expertise to a dedicated engineering team, with hands-on work in enterprise patching, endpoint configuration, and Tier 3 support.

Position Title: Senior Intune Engineer

Security Clearance: S, TS Eligible

About XMS Solutions

XMS Solutions is an IT and cybersecurity company supporting federal agencies and commercial organizations. We specialize in identity and access management, cloud technologies, cybersecurity, and IT modernization. Our team is committed to delivering innovative solutions, solving complex challenges, and supporting mission-critical operations.

Benefits

XMS Solutions offers an excellent benefits package, including **100% employer-paid medical, dental, and vision premiums for employees and their dependents**. Additional benefits include paid time off, paid holidays, a 401(k) with company match, and company-paid life and disability insurance.

JOB DESCRIPTION

This senior-level Windows engineering position provides IT support in integrating and operating Microsoft Configuration Manager (MCM) and Intune for managing and maintaining department endpoints. The preferred candidate will be a senior IT engineer with extensive hands-on experience with Microsoft Intune, Entra ID, and MCM. The candidate should have direct experience in packaging and delivering system and application patches with both Intune AutoPatch and MCM. The well qualified candidate will have direct hands-on experience in providing Tier 3 support for MCM and Intune issues within a large government organization.

The position will have a hybrid telework arrangement with on-site presence three days a week, at a secure government facility within the Washington metropolitan area. Work schedule will be Monday through Friday during normal business hours. Work location and schedule are subject to change based on government requirements.

Responsibilities include:

- Participate in a dedicated engineering team to configure, operate and maintain endpoint patching services with MCM and Intune AutoPatch at an enterprise level.
- Identify and configure endpoint collections to be added to the Intune Rings for testing and production rollout.
- Develop and generate tailored Intune performance reports
- Plan, package, and deploy recurring Windows quality and feature updates with Intune
- Support policy, app and device configuration management for endpoints, including test, deployment, and maintenance activities.
- Develop Intune related technical documentation such as system administrator guides, knowledge articles, quick reference guides, SOPs, FAQs

Required Education/Skills:

- Hands-on Microsoft system administrator experience in operating and maintaining Microsoft 365 services using Intune and MS Entra ID
- Prior experience in providing Tier 3 support for Intune, MCM, and Distribution Points
- Experience with configuring and maintaining Microsoft AzureArc in a hybrid environment.
- Experience in packaging and deploying Windows and application patches using MCM
- Experienced with implementing and managing endpoints at scale using MCM, MS Intune, Windows Autopatch, and MS Entra ID for endpoint
- Experienced in developing complex status reports from multiple data sources using Power BI
- Bachelor's degree in computer science or related field **and** 9 years or more of related experience. Or a Master's degree and 7 to 12 years of related experience.

Desired Education/Skills:

- PowerShell scripting and Group Policy management
- Prior work experience supporting U.S. government agencies
